10. Assemble the playhouse by attaching the back, left and middle panels (B+L+M) to the front and side panels (F+R).

11. Attach the top panel (T).

# NB!

LABYROOM is not suitable for children under 3 years of age. It should be positioned on the flat surface; two separate modules should not be mounted one on top of the other. While assembling the playhouse, only the original bolts and nuts from the package must be used. If you require the additional bolts or nuts, they have to be the same type as the original ones. Exposed bolted joints cannot be used; all the bolted connections must be covered by protective plastic caps. While assembling the playhouse, make sure all the bolts and nuts are securely fastened. Do not use the nitro compounds to clean the panels. Do not use self-made or random details to replace the broken ones. In case of neglecting to inspect the module regularly, it can become hazardous for its user.
