For foundation use foundation blocks or poured foundation. Foundation must be hidden under the floor. Dig the foundation blocks into the ground so that the wooden floor is 5cm above the ground. When the foundation is ready, place the base frame on it. Place the floor elements on the base frame and fix them together with 5x90mm screws. Fix the beams (screws 5x90mm) on the edges of the floor elements to cover the base frame and give more strength to the floor. It is important to drill the holes for screws 2 mm smaller than the diameter of the screw.

DETAIL A
SCALE 1 : 10

metal corner
screw 4,8x60

DETAIL B
SCALE 1 : 10

screw 5x90

Place the posts to the corners of the floor and fix the top belt beams to post with 2 screws 5x90mm. Tighten the whole construction so that there will be no space between the belt and posts. Fix the posts to the floor with metal corners and the screws 4,8x60. It is important to drill the holes for screws 2 mm smaller than the diameter of the screw.

screw 6x150

screw 4,2x45

DETAIL E
SCALE 1 : 15

E

Place the first roof panel above the door, use the support pole to regulate the height of the roof panel. Note that the roof panel is placed right in the middle between the posts and the overlapping edges of the roof are on the same level. Fix the roof panel to the post with the screw 6x150mm. Take the next roof panel and fix it to the first roof panel with screws 5x90mm. If all the roof panels are installed add the beams to the roof edges with the 4.2 x45mm screws. It is important to drill the holes for screws 2 mm smaller than the diameter of the screw.
